

Partners in Russia

Environmental Policy Research and Consulting Centre

“Ecopolicy” provides research and practical advice on environmental policy formation and implementation in Russia during its transition to a market economy and democracy.

Ammophos

Ammophos is a private company producing fertilisers in an ecologically friendly way. This is achieved by reducing residual wastes after the production cycle and by reducing the emissions of harmful substances into air, water and underground water. Ammophos strives for continual improvement in its production processes.

Caspian Marine Scientific and Research Centre

“KASPMNIZ” provides informational support to environmental decision-making processes in the Caspian Sea region. The centre fulfils this mission through the monitoring, assessment and forecast of the state of the Caspian environment, including its river deltas. It also seeks to foster cooperation among hydrometeorological services, scientific organisations and businesses by supporting environmental information exchange and raising public awareness.

Ecological Projects Consulting Institute

EPCI is a non-commercial organisation implementing environmental projects and programmes that seek to foster intersectoral, interregional and international cooperation for the achievement of sustainable development.

Nizhny Novgorod State University of Architecture and Civil Engineering

NNSUACE provides higher education services, conducts research and development and disseminates knowledge. This is enhanced by its attention to scientific, educational and cultural ties with Russian and foreign entities.

Research Innovation Project Institute “Cadastre”

Cadastre assists Russia and its regions’ sustainable growth through the provision of scientific, design and consulting services to public authorities and local self-governments, businesses, public organisations and individuals.

Saratov State Socio-Economic University

The university is a state scientific and educational institution that trains more than 10,000 students to become qualified specialists in economics, social science, environmental issues, and humanities. It is also a large scientific centre providing analytical services for the executive and legislative authorities within the Saratov Oblast and other Russian regions.

UNESCO Moscow Office

The Moscow Office of UNESCO (the United Nations Educational, Scientific, and Cultural Organisation) acts to increase the presence, impact and action of UNESCO by extending and reinforcing the organisation’s activities in education, science, culture and communication throughout Armenia, Azerbaijan, Belarus, Republic of Moldova and the Russian Federation.

Partners in the European Union

Rupprecht Consult Forschung und Beratung GmbH (Germany)

Rupprecht Consult is a research and consultancy company based in Cologne, Germany committed to the sustainable development of cities and regions in Europe and across the globe. It realises this by providing support to all concerned actors, since sustainable development requires the cooperation and participation of all stakeholders and citizens. In tandem it contributes to the development of interrelated policy fields. Rupprecht Consult is responsible for the Cabri-Volga Project's management.

Aristotle University of Thessaloniki (Greece)

Under the auspices of the Aristotle University of Thessaloniki and UNESCO, INWEB (the International Network of Water-Environment Centres for the Balkans) devotes itself to the sustainable management of water resources and conflict resolution, particularly in transboundary areas within the Balkans. It fulfills this mission by promoting a multi-disciplinary approach to water resources management, hosting joint trainings and facilitating the exchange of expertise.

Centro di Cultura Scientifica "Alessandro Volta" (Italy)

Based in Como and established in 1983, Centro Volta is a non-profit organisation that seeks to promote scientific research through the practical application of science and technology to society's needs. Its activities are identified by a scientific committee, the members of which are appointed by the deans of nine universities from the Lombardy Region.

Compagnie Nationale du Rhône (France)

For more than 80 years CNR has been responsible for the Rhone River between the Swiss border and the Mediterranean Sea. It oversees multipurpose development schemes such as hydro-electrical power generation, navigation and the use of the river for irrigation. The company also sells its services abroad in the field of engineering.

Institute for Water Resource Management and Hydrological and Rural Engineering of the University of Karlsruhe (Germany)

The institute provides education, research and consultancy for the public and private sectors with special focus on technology transfer in the fields of hydraulic, rural and aquatic environmental engineering, water supply, hydrology and water resources management.

International Ocean Institute (Malta)

The institute is a non-governmental, non-profit international organisation devoted to the sustainable development of the oceans. It was founded in 1972, is headquartered in Malta and has operational centres located around the world in 25 countries. It seeks to enhance, promote and advocate the peaceful and sustainable uses of ocean space and coasts as well as the management and conservation of their resources. It also studies the interactions between rivers and coasts.

Regional Environmental Center for Central and Eastern Europe (Hungary)

The REC's mission is to assist in solving environmental problems in Central and Eastern Europe. The center fulfils this mission by promoting cooperation among diverse environmental stakeholders, supporting the free exchange of information, and promoting public participation in environmental decision making.

United Nations University – Institute for Environment and Human Security (Germany)

The institute aims to advance human security through knowledge-based approaches to reducing vulnerability and environmental risks.

Wageningen University (Netherlands)

The university seeks to explore the potential of nature to improve the quality of life.
